## Notebook, PN-Undated.6

This pocket notebook was used by Edison in the late 1880s or early 1890s for notes regarding phonographs and phonograph cylinders. Some of the entries concern experiments on sunspot disturbances. Also included are 2 loose pages of chemical notes probably related to phonograph cylinders. The pages are unnumbered. Only 3 pages have been used.

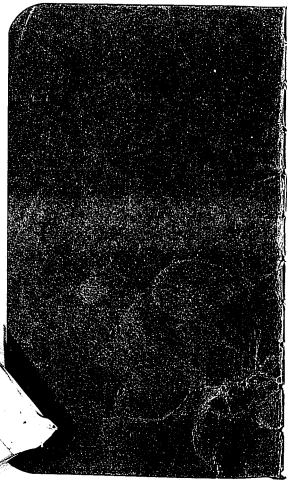

Figure out new selling movement or Specialty for Cecily + undertaker

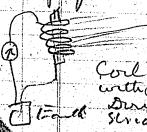
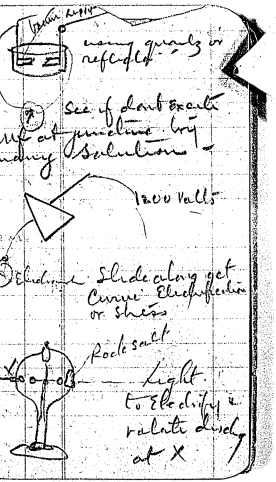
Make new trial of Wax with Ball Recor- perhaps some of softer waxes work

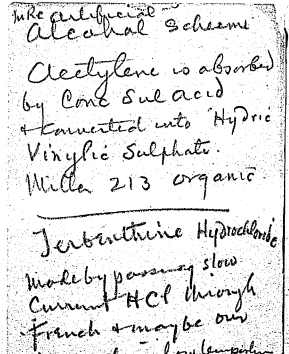
Pulp the Asbestoform in Alcohol until to almost fluff or powder Dry it + then see if swells much + if moistened with Chloro it softens - Try for White Hard Rubber as I notice it got hard enough by heart put Payne on it -

Speak Kennelly - Light
Electrolysis Explain Sun Spot
disturbance - Earth Currents
& Comets Tails repelling
Electrometer Scale - Rock
Salt telescope - Rock
Salt or Quartz Spectroscope
Then read absorption
of Ultra Refrang on
Scale & oscillations -
View phosphoresc sub thro
Rock salt & then glasses
or turn angles of prisms to
opposite -





[ITEM FOUND IN BOOK]



Methylsulphuric Alcohol Scheme

Acetylene is absorbed by Conc Sul Acid & converted into Hydric Vinylic Sulphate.
Miller 213 organic

Terbenthine Hydrochloric

Made by passing slow Current HCl through French & maybe our turpentine, low temperature
Melts 118, 244 Febr
Navy Like Miller
224 - Organic

Forfeits -

Nitrobenzene not acted on by Pentachloride Bromine Gutbier -

See Hexabromodiphenyl amorphous salt - also Hexachlorodinaphthyl, also Tetranitrodinaphthyl, Phenocyclenes -
Miller organic
388, also
Colorless amorphous Tetrachlorodinaphthyl mp 187 or 368 Febr
Wheeler - see p 384
